

SWOP – 502

Offline Programming Software

Description

VIEW Metrology Software (VMS) Offline Programming Software provides the capability to create vision measurement programs off-line on any properly configured Windows-based PC. VIEW CAD Import Software is included in this package.

Details

The offline version of VMS is nearly identical to on-line measurement software used to operate your VIEW metrology system. VMS Offline simulates the lower level functions such as stage motion and image processing as needed to create robust part measurement routines.

- The part model is created by importing a CAD file or by entering nominal feature descriptions and tolerances.
- Stage motion is simulated using the part model and the mouse.
- Camera positioning is guided using the part model and the simulated stage motion.

Benefits

With VMS Offline Programming Software, you can write measurement programs on a stand-alone computer without interrupting the part inspection process on the metrology system.
